The following information is intended for recreational and pleasure crafts users who pass through the locks located on the Austrian Danube. Its purpose is to ensure smooth and safe lockage.

The detailed rules of conduct at locks are included in the current version of the Austrian “Waterways Traffic Regulations” (WVO, § 6.28, § 6.28a and § 6.29) and are available for download at [www.doris.bmvit.gv.at](http://www.doris.bmvit.gv.at).

Information on waste disposal for pleasure crafts can be found online in the corresponding service area at [www.doris.bmvit.gv.at](http://www.doris.bmvit.gv.at).

Current information about restrictions, closures and other events of significance for inland navigation are published in the Notices to Skippers, which can be accessed at [nts.doris.bmvit.gv.at](http://nts.doris.bmvit.gv.at).

**Edition No. 2 / 2019**

All information contained in this brochure is based on the current “Waterways Traffic Regulations” WVO, status 24. 4. 2019. viadonau does not assume any responsibility for the topicality, correctness, completeness or quality of the information provided.

Relevant Waterway Signs

IN ACCORDANCE WITH THE WATERWAYS TRAFFIC REGULATIONS

A – Prohibitory Signs

A.1 No Entry

A.1.1 Blocked water area, except for small crafts without engine

A.7 Mooring on the bank prohibited

A.12 Motorised crafts prohibited

A.14 Water-skiing prohibited

A.16 All crafts other than motorised vessels or sailing crafts prohibited

B – Mandatory Signs

B.1 Proceed in the direction shown by the arrow

B.2b Move to the side of the fairway on the starboard side of the vessel

B.5 Stop as prescribed in the regulations

B.6 Do not exceed the speed indicated (in km/h)

B.7 Sound horn

B.11b Make contact using a radiotelephone link via the VHF channel indicated on the board
Each vessel user is obliged to behave in such a way that **traffic safety** is ensured and no other party is harmed or endangered.

**Consideration** for other vessels is of the utmost importance!

Follow the lock keeper’s **instructions at all times!**

Before lockage, each crafts must **notify the lock** by VHF radio, intercom system or phone.

The **lock area** is defined by the Waterway Traffic Regulations. It is generally marked for each respective lock by the mandatory sign “use VHF channel”.

As a general rule, small crafts are not locked through individually but **together with other small crafts**.

In the case that your crafts is locked together with larger vessels (e.g., passenger vessels), **the larger vessels must enter the lock first**.

Small crafts may moor in all locks next to other vessels as soon as they are moored and ready for lockage, provided that at least one third of the usable width of the lock is available for the small crafts over the entire length of the lock chamber. In this case, small crafts shall leave the lock before the other vessels and adjust their course and speed after leaving the lock in such a way, that they do not obstruct the exit of the other vessels.
At the locks Ottensheim, Abwinden, Wallsee, Melk, Altenwörth, Greifenstein and Freudenau, pleasure crafts with a length of less than 20 metres can only be moored while waiting for upstream lockage within the two-thirds of the upstream half of the lock chamber.

During lockage life vests must be worn at all times by all persons on deck! Without life vests, your crafts will not be locked!

Always use fenders to prevent damage from collision.

Leaving the crafts when it is in the lock chamber is strictly forbidden, unless you need to contact the lock keeper (e.g. to announce that you are ready for lockage via the lock-intercom).

Swimming and bathing in the lock area and in the lock chambers is strictly forbidden.

At water levels above the highest navigable water level (HNWL) a general driving ban applies to pleasure crafts, vehicles used for training purposes by skipper schools and vehicles rented out for sports and recreational purposes, as well as waterbikes and amphibious vehicles.

Rowing boats, canoes and similar crafts which can be carried over land by the crew, must use the Bypass Facility. Should this facility be closed, these crafts may then use the lock. You are required to wear a life vest at all times.

THE 1ST STEP: Notification of Arrival

When approaching a lock, speed must be reduced and contact with the lock keeper made. In Austria, small crafts that should be locked must register for lockage via radiotelephony at the individual radio channel, via the external lock-intercom or, if they are within the visual range of the lock keeper, via mobile phone (see table on page 22).

For pleasure crafts there are merely reference times for locking (see table on page 22).

In the case of heavy commercial traffic, pleasure crafts are obliged to give way to these vessels and the lock keeper will decide when and how each vessel will be locked through.

Such decisions are subject to extensive legal provisions. These include regulations relating to safe distances to be observed and restrictions on locking vessels together (e.g. vehicles marked with one or more blue cones). These regulations are binding for the lock keeper and we therefore ask for your understanding and patience when the reason for waiting times seems unclear.
Overtaking before entering and when in the lock is prohibited.
Vessels must enter the lock in order of arrival. Overtaking other vessels is only permitted by instruction of the lock keeper. If you are locked together with commercial vessels (e.g. passenger vessels), the larger vessels should be allowed to enter the lock first. The mandatory requirement to wear life vests for all persons on deck during lockage applies to all vessels shorter than 20 metres (Waterway Traffic Regulation Directive § 6.28 Paragraph 7 lit. g). Without life vests your crafts will not be locked!

Entering the lock is regulated by traffic signals with the following meaning:
One or two red lights when entering: Entry prohibited, wait until the traffic signals change to green.
Two green lights when entering: Entry allowed. Please watch out for any additional instructions from the lock keeper.

How to use the intercom system:
- Push the call lever and then release it: connection is made with the control tower
- When the lock keeper answers you can speak freely
- Once the conversation has ended, the lock keeper will terminate the connection

The 2nd Step:
Entering the Lock

Intercom System:
- Loudspeaker
- Call lever
- Microphone

Should you not receive permission to enter, moor your vessel at the waiting berth for pleasure crafts and wait for the lock keeper’s instructions or follow the traffic signals.
Enter the lock at reduced speed in order to be able to come safely to a halt even without engine power and avoid collision with parts of the lock or other vessels (e.g. ship collision protection equipment). Failure to observe this order may result in falling overboard and drowning! Standing between the vessel and lock wall can result in serious injury!

When navigating into the lock, **enter as far as possible to the front of** the lock chamber and moor in a way that does **not obstruct other vessels**.

When **locking upstream** at the locks of Ottensheim, Abwinden, Wallsee, Melk, Altenwörth, Greifenstein and Freudenau, pleasure crafts shorter than 20 metres should only be moored in the two-thirds of the upstream half of the lock chamber; otherwise they run the risk of being affected by waves from inflowing water.

This area is marked with **yellow or white demarcation lines** on the wall at the locks mentioned above.

Small crafts may moor in all locks next to other vessels as soon as they are moored and ready for lockage, provided that at least one third of the usable width of the lock is available for the small crafts over the entire length of the lock chamber. In this case, small crafts

shall leave the lock before the other vessels and adjust their course and speed after leaving the lock in such a way, that they do not obstruct the exit of the other vessels.

Whenever possible, moor at the edge of the lock chamber where the **floating bollards** are located, or at the **outer wall**.

Keep a safe **distance** between your vessel and other vessels.

Fasten your boat to a **bollard**. Always tie the ropes to the bollard in such a way that repositioning is always possible during lockage, otherwise there is a danger of capsizing and drowning!

After mooring, turn off the engine.

Notify the lock keeper by **VHF radio telephone** or **lock-intercom, bell ringing, voice or hand signals** that you are ready for lockage.
During the lockage procedure, tie the ropes in such a way that collision with parts of the lock or other vessels is avoided.

**Tie the rope with a tension that is suitable to the current water level.** Loosen or tighten the ropes according to the situation.

Always choose a bollard according to the water level. If the water level changes so drastically that using another bollard becomes necessary, keep your crafts steady with a boat hook, remove the loop from the bollard and moor the vessel at a more suitable bollard.

Remain calm at all times and work methodically and without stress.

Always keep a knife within reach in order to be able **to cut the ropes in case of emergency!** In the case of interruption of the lockage, a difference in level of between 90 and 140 cm can be expected before the locking process stops.

Failure to observe these instructions can result in the risk of falling overboard and drowning!

**Leaving** the crafts when in the lock chamber during lockage is **strictly forbidden,** unless you need to contact the lock keeper (e.g. to announce that you are ready for lockage via the lock-intercom).

**Lockage Upstream**

If your crafts is being locked upstream, you should be aware of the current caused by the inflow of the water into the lock chamber. Depending on its design, a **lock chamber can be filled with water** in various different ways:

In all locks except for Aschach and Persenbeug, the inflow comes from the openings in the lower head area resulting in a **strong flow upstream.** Due to the nature of the flow, the crafts needs to be firmly secured.

In the **lock at Aschach,** the inflow is provided by slots in the floor of the lock chamber, resulting in a **weak flow.** Nevertheless, the crafts still needs to be firmly secured!

In the **lock at Persenbeug,** the inflow is provided by the lifting of the upper head. Be aware that when mooring your crafts that the lock of Persenbeug **does not have floating bollards!**

When locking upstream, the crafts should be secured in such a manner that the bow is padded with fenders that cushion the crafts from the wall of the lock chamber. If there is no possibility to use fenders, one of the crew members should ensure that the critical area of the crafts is protected.
Lockage Downstream

Even though locking downstream is easier than upstream, it still requires full concentration and close attention to detail.

The crafts is attached to the bollard in the direction of travel.

In order to attach the crafts to a floating bollard, the line from the fairlead located in the middle or rear of the crafts should be attached to the bollard. The rope should be tied using a slipknot at an appropriate tension that ensures that the rope can be removed at anytime.

In order to secure a vessel to an inset bollard, two lines should be attached. The vessel should be secured in a fashion that ensures that the fenders cushion the bow of the crafts from the wall of the lock chamber. While one of the lines is under tension, the other line should be attached to the next highest inset bollard. In addition, a boat hook can be used to help secure the vessel to the ladder situated in the wall of the lock chamber. A boat hook on its own, however, is not enough to secure the vessel during lockage.

When tying the boat to inset bollards, only a line from the stern needs to be attached; working together with another crew member will make the switch from one bollard to another much easier.
THE 4TH STEP: Exiting

As soon as the water level has equalized, the lock keeper will open the gates.

Wait for the signal from the traffic signal system to leave the lock.  
**A red light** at the exit indicates: no exit. Wait until the signal has changed to green.  
**A green light** at the exit indicates: exit allowed. You can slowly leave the lock.

When leaving the lock, navigate in a timely manner but try to avoid causing a wash.

Should you be locked together with large vessels (e.g. passenger vessels), **let them leave the lock first**. Please follow the instructions of the lock keeper.

Should you be just behind a larger vessel, signal your presence (**warning horn, friendly hand gesture**), so that the captain will not create a wash.

As described, in the second step of entering the lock on page 14, pleasure crafts shorter than 20 metres may **leave the lock prior to other vessels** if they are moored next to other vessels.

* on Sundays and public holidays

These are merely reference times for lockage. The right to have these respected does not apply during heavy traffic situations involving large vessels. When and how lockage is to be carried out is decided solely at the discretion of the lock keeper.
Lock Nussdorf on the Danube Canal

Pleasure crafts with engine **must not navigate on the Danube Canal.** Only during the months April to October, this prohibition does not apply to pleasure crafts navigating upstream between 09:00 and 22:00 hours. These crafts must not overtake commercial vessels; the speed limit is 20 km/h.

In the months between April and October, **lockage is carried out on weekdays between 8:00 and 15:30 PM except for Saturdays.**

Pleasure crafts are only locked through **together with** commercial vessels on liner service voyages, or after these have been locked. There is no entitlement to separate lockage.

You are strongly advised to contact the lock at Nussdorf by phone before entering the Danube Canal at River-km 1919.4.

### viadonau

viadonau is a company established by the Federal Ministry for Transport, Innovation and Technology. At six locations and ten locks along 378 river kilometres (Danube, Danube Canal and mouth of Traun, Enns and March), more than 250 employees care for the natural landscape and waterway. Our common goal is the careful and sustainable development of the Danube as both a habitat and an economic region. Every measure we take and every service we offer is designed to enhance crucial environmental, safety and economical aspects. Our commitment is to a well-balanced, long-term strategy for the natural environment, the people living and working along the river and for Austria itself. The employees at the locks work around the clock for our customers and oversee the lockage of more than 100,000 vessels per year.
